Theme Developer Application Task

Finding a good superhero to ward off evil in our endless pursuit for WordPress nirvana is darn hard work, you've got those that want to be, but can't ever be. Those that don't want to be but it's a means to an end and they'll do what they have to. You then have those that aspire to shine a light in the midsts of night, to fend off evil wherever it may lurk, to save one WordPressian at a time, to be something great.
Be the hero we need, come join us in our mission!

CampusPress is built to handle large traffic which means that code it runs needs to meet bit different coding standards. Our code guidelines for clients are available on https://campuspress.com/docs/developers/. Creating WordPress themes usually does not involve usage of code that might be bad for performance but it's good to have those guidelines in mind while working on this application. **What's really important for education clients is accessibility so please make everything follow all accessibility standards as much as possible.**

Your task will be to create a child theme for CampusPress Flex theme: https://github.com/campuspress/campuspress-flex

The goal of this theme will be to add a new custom block to the editor. To speed things up, please integrate it with the theme by using a plugin like "Genesis Custom Blocks": https://wordpress.org/plugins/genesis-custom-blocks/

If you are more comfortable with another tool that is similar to this, it's fine to use it instead as long as we can access it. On top of that, feel free to use any 3rd party scripts/libraries that can be beneficial for the project.

Below you can find the wireframe for the block. Please don't worry about spacing, sizes or animations. As long as it will look similar, it's fine. What is more important here is accessibility - please focus on that.

Praesent nec sapien ut leo facilisis. Nunc tortor diam, semper

vitae lectus in, euismod malesuada libero. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Aliquam lacinia nibh felis, eget euismod nisi pretium sit amet. Donec nec iaculis diam. In hendrerit fringilla ipsum, dictum laoreet nibh porttitor et. Sed hendrerit vitae lorem in venenatis. In hac habitasse platea dictumst.

Read More

New block has exactly 2 items that include:
- Image (visible in place of grey background)
- Title (bold text at the beginning)
- Description (regular text after the title)
- Link (link for "Read More" button)

On the wireframe, item "02" is currently active but visitors can toggle between items by clicking on images (grey backgrounds). This action should expand the newly activated image, shrink the other one and toggle the content.

After completing this task, please return the ZIP with the child theme directly to us.

Good luck!
