

# FE/REACT Developer Application Task

WPMU DEV

CampusPress

Edublogs

Finding a good superhero to ward off evil in our endless pursuit for WordPress nirvana is darn hard work, you've got those that want to be, but can't ever be. Those that don't want to be but it's a means to an end and they'll do what they have to.

You then have those that aspire to shine a light in the midsts of night, to fend off evil wherever it may lurk, to save one WordPressian at a time, to be something great.

Be the hero we need, come join us in our mission at WPMU DEV!

Please follow the below link and complete this assignment as part of our interview process.

Your task is to convert [this](https://invis.io/K7V8HV6Q9HM) design into a fully working static template.

Please do your best with modern code using ReactJS (Either Vanilla JS or ReactJS but ideally ReactJS as its the JS Library you will be working with if successful)

Please respond with the completed task in ZIP file format.

We'd also appreciate it if you could go into some detail regarding your knowledge on the below:

- What would you use to make an app/site pass WAI Test?
- Which processes would you use to optimize a React App for speed and performance?
- What was the most significant project you ever worked on with React? What was your job/role? Describe what tools and app architecture was used on that project. If possible, share a public repo where we can check.

Once complete all you have to do is submit your application and wait for the team to get in contact. We'll aim to do this within 10-15 working days.

It's that simple! Good luck.
