

WPMU DEV Support Application Tasks
DAPP-121014

Hola!

So you want to work at WPMU DEV?

Of course you do, why else would you be looking at this task sheet :)

We're looking for the right people to join our team, ideally you'll already have some solid experience with our plugins and services to kick-start your training, but it's not required.

We also want to gauge how great your skills are, so here are some quick tasks you'll need to complete and submit with your application.

1. How's your code?

Some guy wants all of his members to have a unique customer ID that he can display whilst they're logged in. He wants to simply activate the plugin, which has the option of a shortcode to use in his posts/pages, and a function to use within his theme, can you make a simple plugin or some code that they can use within their theme functions.php?

Over to you!

2. And what about your theming?

At WPMU DEV we don't just provide our members with support for our own products, we offer them support for any WordPress issue at all, to the best of our abilities.

Jane, she's using one of the default WP themes and she's just sent in a request to remove her logo/site name (don't ask, she just wants it), but she doesn't want to stop there because then she wants her menu aligning in the center.

Oh, this is her site: <https://tasksheet.tempurl.host/twenty-twentyone/>

What do you suggest?

3. Something simple, really?

Every now and then we got some members that signup, pay, and even download some plugins but don't have any idea how to install WordPress or those plugins. We've even had some that didn't know what WordPress was, really!

Assume that you're chatting with your gran or granddad and they have never used a computer in their lives, in fact don't even use a mobile phone.

They ask you what you do, in 200 words or less, explain in the simplest of ways what WordPress really is and why it's important, also explain what a plugin is, use at least one analogy that anyone should be able to understand.

4. Some more styles please!

Often members need a few CSS changes, they turn to us for advice and because we're super cool we want to help them. This member wants to change our theme here: <https://tasksheet.tempurl.host/>

They mocked up exactly how they want it (lucky you, most don't), pay attention to that detail and help them achieve what they want. Don't forget to also let them know how to make your changes.
