

UI/UX Plugin Design Application Task

WPMU DEV

CampusPress

Edublogs

So you want to become a WPMU DEV UI/UX Plugin Designer - why else would you be here?

The person we're searching for will have intimate knowledge of WordPress, combined with dazzling experience in UI/UX design.

This mini-task is designed to learn more about you, your design style, and how you think and approach day-to-day activities. There's no need to sweat; it's pretty simple.

Be the hero we need; come join us in our mission at WPMU DEV!

We are looking for some awesome UI/UX designers to join our Plugin Design team. To succeed in this application, you must have an understanding of how WordPress works.

We can see from your application that you can talk the talk, but can you walk the walk?

To get the ball rolling, we'd like to assess your UI/UX design skills and experience with similar projects. Please send us a **list of plugins or apps you've worked on, your top three plugin designs, a couple of design case studies (optional), and a link to your portfolio (or a copy of your CV).**

Please also install [Hummingbird](#) or [Smush](#) Plugins, pick any plugin part, and suggest UI/UX improvements. Explain the purpose of these improvements, whether it's to make the plugin more intuitive, improve usability, enhance onboarding, increase conversions, etc.

****If the above steps are not completed, our management team will not assess the application.***

In addition to this, we're looking for:

Figma only, designers. To design for us, you must be proficient in Figma, as it is our main design tool. We ask that you go into a little bit of detail regarding your skills and knowledge of Figma and whether you have experience using it.

Someone who can follow and use our design process, including our Figma libraries and shared design system. Someone with experience in using design systems and already defined design libraries.

Once you've sent over examples of your work and gone into some detail regarding the above, we'll be back in contact with an update.

Good luck!
